

DRIVEMETRIX PRO

THE NEXT GENERATION OF DRIVER MONITORING SOFTWARE

DriveMetrix is driver monitoring software for the commercial trucking industry that is intuitive and easy to use. It provides clear, measurable information about safety and cost performance of each driver, and offers easy access and use of that data. The driving performance “dashboard” provides rapid assessment of driver performance on an individual or group level, without the hassle of lengthy data research and organization. With a quick and easy way to access key information, companies can pinpoint a problem and put actions in place to resolve it as soon as possible.

DRIVEMETRIX PRO FEATURES

- ◆ Easy to access snapshot of fleet safety performance
- ◆ Quick and easy identification of drivers with crash risk and cost performance issues
- ◆ Workflow and accountability assessments for key safety challenges
- ◆ Ability to compare performance among operating groups
- ◆ Alerts for changes in key performance measures
- ◆ Enterprise-level access and security
- ◆ Extensive data mining and export capability
- ◆ Intuitive and easy to use

10% OF DRIVERS IN A TYPICAL FLEET ACCOUNT FOR 80% OF CRASH RISK

Management Review:

Want to get the most out of data to help manage expenses, risk and easily track problem areas? DriveMetrix does that and more. An alert system within the software allows users to set up automated monitors to notify the company directly about any changes in a performance metric. Users have access to a variety of data views to easily compare safety and cost performance of individual drivers as well as groups.

Data Exploration:

Collecting data is only one step in the process. DriveMetrix Pro also provides a way to pull together key data on driving safety issues within your fleet and display them according to specific drivers, date ranges and groups. Information is displayed in graphs and loaded into spreadsheets for further filtering, sorting or export. Break down the details by raw data, number of incidents per mile, or any other filter that fits a specific business need.

Driver Comparison:

Want to know which drivers in your fleet take the most risks? Pull individual driver data and compare it side by side to assess your total amount of crash risk, or review operations costs per driver including fuel mileage, tire usage, brake wear and tear, etc. Discover unexpected ways to cut costs and improve driver safety.

Driver Coaching and Feedback:

Now the data is collected and the risky drivers are identified. What's next? Using that data to help change their behavior. Transecurity offers driver coaching provided by driver safety supervisors. Over the course of coaching sessions, information is used to compare improvements from session to session so that driver progress can be tracked, and problem areas are closely monitored. A teacher's edition is also available to provide a clear "road map" for effective feedback.
